SUMMARY

I'm an aspiring data scientist who is skilled in turning raw data into clear insights that support better decisions. I work with Python, SQL, and visualization tools to analyse patterns, build models, and communicate results in a way that makes sense to non-technical people. I focus on asking the right questions, validating assumptions, and delivering analysis that is practical, accurate, and useful.

WORK EXPERIENCE

Data Scientist Intern - CodeNatives **Jul 2025 – Aug 2025**

- **Technical Contribution:** Worked on data preprocessing, exploratory data analysis, and feature engineering using Python, Pandas, and Machine Learning libraries to prepare reliable datasets and support model development across ongoing projects.
- **Value to Company:** Delivered structured analysis, predictive insights, and clear visual reports that helped the team understand data patterns, improve model accuracy, and make more informed, data-driven decisions.
- **What I Learned:** Gained hands-on experience with the full data science workflow-from handling messy real-world data to validating models, interpreting results, and communicating insights effectively within a team environment.

Data Scientist Intern – EvoAstra **Oct 2025 – Nov 2025**

- **Technical Contribution:** Led and contributed to data science projects involving web scraping and image captioning, working with Python, data extraction tools, and deep learning models to collect, process, and analyse real-world data.
- **Value to Company:** Delivered structured datasets from large-scale web scraping and a functional image captioning solution, enabling the company to reuse cleaned data and trained models for internal research and future projects.
- **What I Learned:** Developed hands-on experience in leading a technical team, breaking down complex tasks, reviewing work, ensuring timely project delivery while deepening my understanding of real-world data and model workflows.

Technical SKILLS

Programming : HTML5, CSS3, JavaScript, Python, C/C++, Java
Databases: MongoDB, MySQL, PostgreSQL
Development & DevOps: GitHub Actions, AWS, Web Scrapping
Development Tools: Git, Github, VSC, Linux
Data Analysis & Visuals: Excel, PowerBI, Tableau, Matplotlib, Seaborn
Core Competencies: ML, DL, NLP, Airflow, Mlflow
Frameworks/Libraries: Scikit-learn, Tensorflow/Keras, Numpy, Pandas, Streamlit, PyQt5, KNIME, Flask

PROJECTS

AI – Based Medical Disease Prediction System

- Built a full-stack medical AI application combining **symptom-based prediction and image classification** (Brain Tumor, Pneumonia, Heart_Disease) using Tensorflow/Keras and ML models.
- Applied data preprocessing, augmentation, and EDA; evaluated models with train-test split achieving strong validation accuracy. Integrated RAG-based medical chatbot using **Pinecone + Groq** for personalized health recommendations.

Interactive Data Analysis App

- Developed a **Streamlit-based application** for interactive data visualization, enabling users to **upload datasets and create visualizations (Bar, Pie, Scatter, Heatmap, etc..)**
- Implemented **dynamic filtering, grouping and data download** options for user-friendly, no code analytics.
- **Deployed** the visualization application in web using **streamlit community and github**.

Medical Chatbot

- Developed Domain specific medical chatbot using **Retrieval_Augmented Generation (RAG)** by processing multiple **medical PDFs into vector embeddings**.
- Integrated **Pinecone** for efficient semantic search and **Groq AI** LLM for context-aware grounded response generation, Designed end-to-end pinecone including document ingestion, embedding storage, LLM based answer.

EDUCATION

B. Tech Artificial Intelligence & Data Science
Sri Venkateswara College of Engineering – 05/2026

High School – Computer Science
A.K.T Academy Matric Higher Secondary School – 05/2022
